Laevinus Torrentius (1525–1595) was one of the foremost humanists of his time. Called the »prince of poets« or »the Christian Horace« by his friends,² he achieved fame as the editor of Suetonius and Horace.³ Well connected with Rome, where he spent several years in his youth, and with the antiquarians, he developed a serious (although interrupted) interest in ancient numismatics.

It turns out that the Royal Library of Belgium holds a rich archive of material relating to this prominent figure. Not only do we possess the detailed inventory of his vast library amounting to more than 1,700 volumes (RLB, Ms. 3974–3975) – very unusual for the 16th century – but we are even more fortunate to have an inventory, made after his death, of his coin collection (RLB, Ms. 6269).⁴ Furthermore, we also have: a bound volume containing copies of more than 1,200 letters sent by Torrentius during the years 1583–1595 (RLB, Ms. 15704); a contemporary copy of the original deed by which he donated some of his properties to the Jesuits in Leuven (RLB, Ms. 16590, fol. 11);³ the manuscript of his commentary on Suetonius (RLB, Ms. 3526); and several books which once belonged to his library;⁶ and finally, several sketchbooks of Latin

1 I am much indebted to my distinguished colleague at the Royal Library of Belgium, Michiel Verweij, who revised the English translation of the quoted Latin passages.

3 The first edition of his commentary on Suetonius was printed by Plantin in 1578 (C. Suetonii Tranquilli XII. Caesares commentarii, Antwerp, Ex officinac Christophori Plantini, 1578; a new edition with the original text was published in 1592). The edition of the Ars poetica of Horatius was apparently ready in 1583, but was only published in 1608, after his death, by Balthasar Moretus. We should also note that his nephew and protégé Jean Lievens (Johannes Livienius) has his place in the history of scholarship, being considered the father of the apparatus criticus (see Luigi Battezzato: Renaissance philology: Johannes Livinieus (1546–1599) and the birth of the apparatus criticus, in: History of scholarship. A selection of papers from the seminar on the history of scholarship held annually at the Warburg Institute, ed. by John Ligota and Jean-Louis Quantin, London 2006, p. 75–112).

4 Another example from the Low Countries is Nicolaas Rockox (1560–1640), for whom we still have the illustrated catalogue of his collection, as well as a record of the numismatic books he bought through Plantin.

5 This document was bought by Charles Van Hulthem in the sale of the Comtesse d’Yve (Brussels, November 1820 – probably no. 6250: Recueil de pièces relatives à l’Université de Louvain; affaires avec les Jésuites et autres collèges de l’Université, 2to. petit in-folio).

françois de Callataÿ

inscriptions copied in Rome by Nicolaus Florentius of Haarlem, and given by him to Torrentius (RLB, Ms. 4347–4349 and 4350).7

Born in Ghent on March 8th, 1525 as Lievin Van der Beke («Beke» in Flemish has the same meaning as «beck» in English: a creek or brook, hence «Torrentius»), Torrentius studied in Leuven (1540–1545) at the highly regarded Collegium Trilingue, founded in 1518 by Hieronymus Busleyden, with Erasmus very much as its inspiration, where students learned Latin, Greek and Hebrew. There he published his first poems at the age of seventeen.8 He then moved to Italy, passing through Paris and Padova on the way, and was appointed Doctor of Law at the University of Bologna in February 1552. He lived in Rome from March 1552 to January 1557, where he was readily accepted into humanist circles. He became friends with, among others: Lorenzo Gambara (ca. 1495–1585), Basilio Zanchi (ca. 1501–1558), Gabriele Faerno (1510–1561), Paolo Manuzio (1512–1574), Guglielmo Sirleto (1514–1585), Antonio Agustín (1516–1586), Marc-Antoine de Muret (1526–1585), Fulvio Orsini (1529–1600), Antonino Caraffa (1538–1591) and Carlo Borromeo (1538–1584).9

In 1557, he was offered by the Liège Prince-Bishop Robert de Berghes the position of Archdeacon of Brabant and Canon of the Cathedral of Saint-Lambert, which he accepted. In 1565, he asked Lambert Lombard, the famous painter and architect (who is also considered to be «the father of Belgian numismatics»), and who had hosted the young Goltzius for two years in Liège (1544–1546),10 to build a new house for him, designed and decorated according to his wishes (fig. 3).11 Appointed as General Vicar of the Principality in 1575, Torrentius had from this point on very little time for otium. Appointed by the new Prince-Bishop as his representative to the Pope, he went back three times to Rome.12 When the Bishop of Antwerp died in 1576, Don Juan of Austria approached Torrentius to replace him. But times were troubled after the Spanish fury in November 1576 and, as a consequence, the embracing by the city of the Calvinist faith. Torrentius finally left Liège in April 1587, after being officially consecrated as the second Bishop of Antwerp eighteen months earlier, on September 10th,
1585. He was 62 years old, and he served in this position until he was chosen as Archbishop of the Low Countries at the end of 1594. He never actually enjoyed this final recognition, since he passed away on April 26th, 1595, before being installed. Not long before he died, Torrentius donated much of his property to the Jesuits in Leuven, including his library and his art collections, as well as a large sum of money.13

Torrentius is pictured in several surviving portraits:14 two paintings (an anonymous one in the church of St. Jacques, Antwerp, 1595, and another one painted by Adriaen Thomasz Key [1544–1590], Provinciaal Museum Sterckshof, Antwerp, 1588); two prints (Philip Galle [1537–1612], Antwerp, 1572 and Gisbertus Vaenius [1562–1628] [fig. 1], the younger brother of Otto); and one medal, by Jacques Jonghelinck (1530–1606) [fig. 2].15

16 Abraham Ortelius and Jean Vivianus: Itinerarium per nonnullas Galliae Belgicae partes, Antwerp, Plantin, 1584: »Quid refertissimas dicamus bibliothecas, picturas, statuas, easque vel huius memoriae artificum, vel antiquas: ita ut in hac sola urbe videre contingat, quae magno vix labore in diversis orbis terrarum partibus peregrinando reperias. Cuius quidem rei vel solae fidem faciant, pulchrae illae aedes quas dn. Laevinus torrentius vir eximius, et nostro hoc saeculo Lyrici princeps carminis, suo sumptu extruixit, in quibus, ut loco ab omni ea parte aperto, quae ad salubritatem requiritur, adiutus: ita singulas earum partes congrue disponendo (ut in eo Lamberti Lombardi pictoris quondam et philosophi celeberrimi inter Eburones, felicem in architectura manum agnoscas), singulisque sua aptando ornamenta, est adsequutus, ut his amoenius nihil esse possit, nec quamvis non ita amplum in spa-

i. Torrentius the antiquarian

Abraham Ortelius and Jean Vivianus, recording their journey through the Low Countries in 1584, have left a vivid description of the city of Liège and, especially, of the house of Laevinus Torrentius as the embodiment of a refined humanism: »What to say of the crowded libraries, the paintings, and statues, both by modern artists and from Antiquity; this is why you have in that sole city [Liège] what you may find at great pain, travelling in the various parts of the world. Sufficient proof of this is given by the beautiful house that Laevinus Torrentius, a remarkable man, and the prince of lyrical poetry of our century, has built at his own expense, aided by the fact that this house is entirely open to that direction which provides most health, he organized every single part of it in such a suitable way (in this you can recognize the gifted hand of Lambert Lombard, formerly a well-known painter and philosopher in Liège) and he provided such a suitable decoration for each room that the result simply cannot be surpassed and that you could not wish for more space. But above all, he honours it the most himself by his benevolence for the students of letters and by his outstanding collections of books and manuscripts, by his ancient bronze sculptures, by his vases inscribed all around by hieroglyphs, in a quantity we have never seen before. Ancient coins, to say the truth, he has in such quantity and of such a rarity (you recognize this well-known expression among the students of this kind) that Italy could envy him: indeed, we think it would not be easy to find elsewhere more names of Roman gentes.»

As with others, his Roman stay as a young man much influenced Torrentius’ tastes. Remembering his Roman years in a piece of late correspondence, he
François de Callataÿ states that: «because I had seen all that this extraordinary man [nb: Antonio Agustín] had in his collection while I was in Rome as a young man, I followed his example and started to become an antiquarian myself, and I pursued this kind of study in such a way that I deferred to no one in the field of ancient coins and other antiquities, neither for their quantity and quality, nor for their rarity».17

A letter written in 1573 to Fulvio Orsini, from his dear friend Charles de Langhe, is explicit about Torrentius’ coin collection: «When Torrentius, sometime after he returned from Rome, informed me that he had already seen a part of your commentary on ancient Roman coins, I can’t say how much it gladdened me, since I have long desired such a thing by a man of superior talent … And since I think this is a difficult task, I advised Torrentius, before he finally came back here to us, not only to exhort and to pray that you should pursue and achieve this most difficult enterprise, but also that he should help you. You will see that he has not a small collection of these ancient coins … I insisted that he should describe them all and send the inventory to you. I added to it the few coins from my collection that Torrentius does not possess, if I could add something myself, and I am pleased I could, otherwise my Itius would have been left unrecorded».18 Indeed, in his Familiae Romanae, Orsini states that: «because I had seen all that this extraordinary man [nb: Antonio Agustín] had in his collection while I was in Rome as a young man, I followed his example and started to become an antiquarian myself, and I pursued this kind of study in such a way that I deferred to no one in the field of ancient coins and other antiquities, neither for their quantity and quality, nor for their rarity».17
explicitly refers to Charles de Langhe as the owner of a denarius of L. Itius.19

Much later, in 1587, at a time when Torrentius was too busy to pursue his antiquarian hobbies, we have a letter to Orsini which throws an interesting light on Torrentius’ numismatic interest: »I renew our old habit of corresponding at the suggestion of Franciscus Oranus, who, after a long stay in Liège with his parents and relatives (during all of which time I maintained cordial relations with him), is going back to Rome, and asked me to write letters to my patrons and friends there to rekindle these relationships; I do so with pleasure, both as a duty, and to be in touch with those whose benevolence I have experienced. That is why you are among the first of them; I have broken the silence, and I could not fail to write to ask you first to welcome Oranus for my sake, although he deserves to be welcomed for his own virtues; and also to ask that, if you find something in the antiquarian sphere that you think would amuse me, you communicate it to me without delay. I would be all the more pleased if you would do this, since I sorely miss our times together, to the point where I often do not know

19 Fulvio Orsini: Familiae romanae quaer reperientur in antiquis numismatis ab Urbe condita ad tempora divi Augusti ex Bibliotheca Fulvi Ursini, Adjunctis familiaribus III ex libro Antoni Augustini, ep. Lierdensis, Rome 1577, p. 112: »Itiae gentis unus tantum denarius reperit, atque is quidem a L. Ilio signatum ut opinor, ad quem Horatii extat ode xxix lib. i inscripta ad L. Ilium: sic in vetustissimis codicibus pro Iccium scriptum reperiri admo- nuit me vir eruditissimus, idemque humanissimus Carolus Langius qui denarii hujus exemplum ad me Leodio perhumaniter misit« (»there is only one denarius of the gens Italia, which I think was struck by L. Itius, the one from Horace’s Ode I, 29. The very learned and suave Carolus Langius informed me that Itius is the reading in very old manuscripts for Iccius. Langius very kindly sent a copy of this coin to me in Liège«). The denarii of L. Itius, although not common (less than 10 obverse dies in Michael Crawford: Roman Republican Coinage, Cambridge 1974, p. 252, no. 209), are no longer considered as very rare (as exemplified by such a denarius which sold for $100 on eBay in April 2011—item 330551011945). The Coin Cabinet of the Royal Library of Belgium acquired one specimen, without provenance, from Charles Dupriez in November 1922 (Inv. II 12493). And the same Charles de Langhe, in another letter to Orsini some time before, when Torrentius was still in Rome, confessed that he eagerly awaited his friend’s return from Rome (since Torrentius had promised him literally »mountains of gold«), like a new spouse awaits her husband, and that in the meanwhile he is cultivating his garden and reviewing his numismatic collection (»Ceperam in manus Sueto- nium quem conabam exploire nonnihil et detegere, [...] Ego dein- ceps cum valetudine luctor, et vale libris dicio, hortulum meum colo, et subinde numismatologia mea revideo, quibus augendus hic posthac ut dixi nulla spes. Torrentius auereos montes promittit, itaque reditum illius non secus ac peregere absentem nova sponsa maritum, expecto« (Nolhac 1887 [note 16], p. 440).

20 Royal Library of Belgium, Ms. 15704 (Epistolae Laevini Torrentii, fol. 6 r–v): »Veterem nostram scribendi consuetudinem ut reducerem, effecto vir clarissimus Franciscus Oranus, qui post diutinam Leodij apud cognatos atque affines suas mansionem, quo toto tempore familiariter co usus sum, Romam rediens, a me petit ut ad patronos atque amicos quos illic habeo memoriae ex- citandae causa, literas ei traderem, quod feci sane perlubenter, tum officii causa, tum ut eosdem quorum ego benevolentiam ex- pertus sum, ipsis quoque adiungerem. Cum itaque tu inter primos occurreremus, rupi silentium neque omittere potui quin scriberem rogaremque primum ut Oranum quanquam suis virtutibus coli dignissimum, meo nomine arctius complectaris, deinde ut si quid in re antiquaria sit quo me oblectari posse putes, iudicandam nos non graveris. Tanto maiorem enim inde percipiam volup- tatem quam magis haec me tempora nostra contristant ut saepe nesciam quo me veram, dolorem non latus nisi solatium ali- quod a Musis interdum accederet. Nam res antiquaria nunc hic prorsus friger postquam militari licenziac ac latorum immantate obsessis ubique itineribus cessant commercia. Itaque multo iam tempore nihil solitae meae suppelpellitici accrevert. Audio quidem te studium istud post infortunium quo tulusi propemodum abie- cisse, sed ego famae fidem non habeo. Quid enim idonee [before correction we read »idoneae] quo nullas possides numismata fac- tus es indocior; mente nunc ca et memoria adhuc possides. Dein- de multiplex et varia haec scientia est, neque nummum ego vete- rem quantumvis rarum atque integrum malum quam antiquam in- scriptionem aliquam unde fere maior et iucunditas et utilitas ex- istit. Omitto veterem auctorum erat tenebris fragmenta quorum omnium si quid incidunt obscuri, mi Fulvi, ut eius fiat mihi copia.
Agustín, for whom the real purpose of collecting coins was to reconstruct ancient history through reliable documents. The hierarchy here is very clear: first literary sources, if any could be still discovered, then inscriptions with historical content, and last coins.

Despite his many responsibilities, Torrentius’ interest in antiquarianism never totally ceased, as exemplified by letters sent to Andreas Schottus, who was then in Spain. On December 5th, 1587, he expresses his nostalgia for the time he spent in Rome 35 years previously (1552), when he enjoyed the friendship of: Ottavio Pantagato (1494–1567), Basilio Zanchi (ca. 1501–1558), Gabrielo Faerino (1510–1561) and Jean Metelius (1520–1597), the only one still alive. He also urges Schottus to send him whatever he can find published by Antonio Agustín, whose memory Torrentius cherishes, and by whom he has seen nothing except the commentary Agustín wrote on Fulvio Orsini’s book about Roman families. On August 30th, 1588, he proposes that Schottus should translate into Latin the Dialoghi of Agustín, to be published by Ortelius. On January 30th, 1589, thanking Schottus for sending the books by Agustín, he goes on to say that, as a young man in Rome, he had wanted to emulate this great man, forming a collection of ancient coins and antiquities that could not be surpassed, either in quantity, quality, or rarity.

In his Latin edition of the Dialoghi of Agustín, which finally appeared in 1612, Andreas Schottus added a twelfth dialogue entitled De prisa religione Disquae gentium. This added section is an imaginary discussion, set in Antwerp in 1597, in which, as a token of friendship, Abraham Ortelius and Schottus himself, also joined by the then deputy mayor Nicolaas Rockox (1560–1640), pay a visit to Torrentius (actually then deceased for two years) to discuss the original dialogues of Agustín.

2. The numismatic library of Torrentius

The Royal Library of Belgium holds the manuscript inventory of Torrentius’ library (Ms. 3974–3975: Catalogus librorum Reverendissimi Domini Laevini Torrentii Episcopi Antwerpiensis), which has been fully translated and commented upon by Marcus De Schepper and Jeanine De Landtsheer. We also possess several books which come from his library, with his mark of property, generally written on the front page.

Referam gratias si quid contra praestare potero. Vale, Torrentii ut ille tui memoria. V. k. Sept. A CMDXXXIII. Ledio.» Five more letters sent by Torrentius to Orsini are kept at the Vaticana. On November 14th, 1573, f. 49 [Liège, January 2nd, 1574], f. 53 [Brussels, April 23rd, 1577]; [Liège, November 14th, 1573], f. 70 [Liège, October 10th, 1581], f. 96 [Liège, September 6th, 1583] – see Nolhac 1887 [note 18], 58, note 1).

21 Delcourt, Houdoy (note 17), vol. 2, 1953, no. 359 (Royal Library of Belgium, Ms. 15704, fol. 188), p. 125–126: «Si tamen ante precatus te fuero ut ad me deferri ea omnia cures quae vel penes te servas vel alius commissisti, facies enim rem mihi longe gratissimam, majorem etiam initurus gratiam si quid a viro illo summum omnio Antonio Augustino, cujus sancta mihi memoria est, addideris. Cum ante annos XXXV adolescentis primum venissem in Antwerp. persepsisse.»

It was a truly impressive library, with at least 1,732 volumes (1,611 entries). In the inventory, the books are organized first by language, then by topic, then by alphabetical order of the authors, but — contrary to what we are used to — by first names instead of surnames. Not surprisingly, most of the books are in Latin (81%) and Greek (14%). The main categories are: religion (23.5%), law (12.5%), history (19.5%), philosophy and sciences (18%), and language and literature (21.5%).

Dispersed through languages and categories, one finds nearly the full set of books on numismatics available at the time. For each of them, the table below (Table 1) gives the original page on the inventory, its current number as determined by De Schepper and De Landtsheer, the full description (in italics) including the format and the type of binding (»p« is for »pergamina«, »c. n.« is for »corius niger« [black leather] and »c. r.« is for »corius ruber« [red leather]) followed by the actual description of the book. As no dates are given for the books, it is not possible to determine which edition was present in the library if a book had been published more than once before 1595.27

They are nearly all there: Guillaume Budé (1467–1540), Andrea Fulvio (ca. 1470–1527), Georges Agricola (1494–1555), Jacopo de Strada (1507–1588), Wolfgang Lazius (1514–1565), Antonio Agustín (1516–1586), Enea Vico (1523–1567), Sebastiano Erizzo (1525–1585), Hubert Goltzius (1526–1583) and Fulvio Orsini (1529–1600).

The few missing ones are: Johann Hüttrich (c. 1488–1544 – »Imperatorum romanorum libellus. Una cum imaginibus ad vivam effigiem expressi«, Strasbourg, Wolfgang Köpfel, 1525); Guillaume Roville (or Rouillé) (1518–1589 – »Promptuarium iconum insignorum a saeculo hominum«, Lyon, 1553 and its several translations published the same year); Antoine Le Pois (1525–1578 – »Discours sur les medalles et graveures antiques«, Paris, Mamert Patisson, 1579); and Adolf Occo (1524–1606 – »Imp. romanorum numismata a Pompeio Magno ad Heraclium«, Antwerp, Christophe Plantin, 1579).

It is likely that the absence of the Libellus of Huttich and the Promptuarium of Roville28 are no accident, since they are corrupted by much fantasy (more than 80% of the engraved portraits are fictitious), so these books were of no real value for a true and learned curioso, as Torrentius.

The absence of Le Pois and Occo, both published in 1579, are best explained by the fact that, at this time, Torrentius was too busy with his developing career and, as he complained in his correspondence, he had no more time for antiquarianism.

More surprising is the absence of some books by: Enea Vico (Le imagini con tutti i riversi trovati e le vite de gli imperatori tratte dalle medaglie e dalle historie de gli antichi, Venice, 1548 and Le imagine delle donne Auguste intagliate in stampa di rame, Venice, Vincenzo Valgristo, 1557); Jacopo de Strada (Epitome thesauri antiquitatum, 1553 [French ed. in 1553 and n. Latin ed. in 1557]); Abraham Ortelius (Deorum deorumque capita ex vetustis numismatibus in gratiam antiquitatis studiose effigiata et edita, Antwerp, 1573); and Fulvio Orsini (Familiae romanae quae reperientur in antiquis numismatibus ab urbe condita ad tempora divi Augusti, Rome, Francesco Tramezzini, 1577).

We do not know for sure when and where Torrentius bought his books. We are only informed that he acquired «en bloc» the library of his much beloved friend Charles de Langhe after his death in 1573. It is also likely that, as was the case for Justus Lipsius and Fulvio Orsini, Torrentius purchased some books through Abraham Ortelius, who conducted intensive business at the Frankfurt book fair every year, and was eager to provide this kind of service to his friends.

28 The publisher Roville is quoted by Torrentius in his correspondence, see Delcourt, Hoyoux (note 17), vol. 2, 1953, no. 564 (Royal Library of Belgium, Ms. 15704, fol. 272), p. 445.

3. THE COIN COLLECTION OF TORRENTIUS

 Torrentius, »archidiaconus Brabantiae«, is one of the six coin collectors of Liège noted by Goltzius in his *Caesar sive historiae*.²⁹ He comes in second place, after Robert de Berghes, the Bishop of the city, but before Arnholdus a Wachtendonck (canonicus S. Bartholomei), Philibertus Ursinus (canonicus), Domenicus Lampsonius (Brugensis, episcopo Leodiensi ab epistolis) and Lambertus Lombardus (philosophus & pictor). The fact that Torrentius, then 33 years old (Goltzius visited Liège in 1558), comes before figures of greater auctoritas, such as Lambert Lombard (53 years old), is probably indicative of the scale of the collection he had already formed.

 There can be no doubt that the bulk of his collection was formed in Rome in the mid-1550s, and it is very likely that he focused from the beginning on Roman coins, in order to illustrate his commentary on Suetonius. At that time, he wanted to emulate Antonio Agustín, collecting antiquities in such a way as to be bettered by no one.³⁰

 We do not know when Torrentius ceased actively buying coins. We do know that he bought the entire collection of his friend Charles de Langhe after he died in 1573 (he paid 400 gold ecus for the whole: books, manuscripts and coins).³¹ And moving from Liège to Antwerp, he declared himself happy that his coin collection was not taken by road bandits.³² But he wrote to Orsini that, if he found a buyer, he would sell his coin collection.³³

 We know that Torrentius himself made a list of his coin collection, which he sent in 1573 to Fulvio Orsini, but that list has so far failed to reappear. What we do have is the inventory written in 1595, the year of his death, by the Jesuits of Leuven (RLB, Ms. 6269). Entitled *Series Arciarum et Numismatum totiusque rei antiquaria, hoc libro content Collegio Lovaniensi Societatis Jesu olim relicta a Reverendissimo episcopo Antverpiensi D. Laevinii Torrentii. Anno 1595*, this inventory was bought by Charles Van Hulthem in 1832 at the sale of the library of Jean-François Vande Velde,³⁴ professor in theology and librarian of the University, and then acquired by the Belgian government for its national library. It opens with a physical description of the 8 wooden cabinets (*arcae*) in which coins were kept, along with other small antiquities.

 The coins are organized by metal and, for Roman bronze coins, by denomination. As a rule (and in contrast to others), he made a list of the coins he owned, and this list has been preserved. The coins are kept in 8 wooden cabinets (*arcae*), and the list is written in a manner that is very similar to the one found in the inventory of the collection of Jean-François Vande Velde, which was also acquired by the Belgian government. The list is divided into two parts: the first part contains the coins of the ancient world, the second part contains the coins of the modern world. The list is very detailed, and it includes the name of the coin, its date, its mint, and its denomination.

 "There can be no doubt that the bulk of his collection was formed in Rome in the mid-1550s, and it is very likely that he focused from the beginning on Roman coins, in order to illustrate his commentary on Suetonius. At that time, he wanted to emulate Antonio Agustín, collecting antiquities in such a way as to be bettered by no one."³⁰

 "We do not know when Torrentius ceased actively buying coins. We do know that he bought the entire collection of his friend Charles de Langhe after he died in 1573 (he paid 400 gold ecus for the whole: books, manuscripts and coins).³¹ And moving from Liège to Antwerp, he declared himself happy that his coin collection was not taken by road bandits.³² But he wrote to Orsini that, if he found a buyer, he would sell his coin collection.³³"

 "We know that Torrentius himself made a list of his coin collection, which he sent in 1573 to Fulvio Orsini, but that list has so far failed to reappear. What we do have is the inventory written in 1595, the year of his death, by the Jesuits of Leuven (RLB, Ms. 6269). Entitled *Series Arciarum et Numismatum totiusque rei antiquaria, hoc libro content Collegio Lovaniensi Societatis Jesu olim relicta a Reverendissimo episcopo Antverpiensi D. Laevinii Torrentii. Anno 1595*, this inventory was bought by Charles Van Hulthem in 1832 at the sale of the library of Jean-François Vande Velde,³⁴ professor in theology and librarian of the University, and then acquired by the Belgian government for its national library. The list is very detailed, and it includes the name of the coin, its date, its mint, and its denomination."
trast to modern practice) each entry first describes the reverse type, then the obverse.

Even though it is significantly smaller than the coin collections of Charles III of Croÿ, duke of Arschot (1560–1612), Abraham Gorlaeus (1549–1609),

37 Van de Velde 2005 (note 36), p. 92 (29,000 coins).
The Numismatic Interests of Laevinus Torrentius (1525–1595), one of the Foremost Humanists of his Time

Ortelius (hence his humanist name: Colius Ortelianus), about other famous Flemish coin collections: Abraham Ortelius (1,925 coins in 1597), Colius Ortelianus himself (1,129 coins in 1603),38 and Nicolaas Rockox, the mayor of Antwerp (1,082 coins in 1614 and at least 1,129 before 1640 [744 in silver and 385 in bronze] when he died).39 Charles de Langhe wrote to Fulvio Orsini in 1573: »You will see that he has a not small collection of these ancient coins«. Indeed Torrentius’ holdings could compete with the coin collection of Orsini himself (70 gold coins, ca. 1,900 silver coins and ca. 500 bronze coins). As noted by Ortelius and Vivianus in 1584 (»indeed, we think it would not be easy to find elsewhere more names of Roman gentes«), his series of Roman Republican denarii appears particularly strong (566 coins). This comes as no surprise, since Torrentius was making use of his denarii for his edition of Suetonius.40

Also impressive, even if well behind the Roman coins, is the number of Greek coins, since these rarely appear in any quantity in 16th cent. collections. With 6 gold, 92 silver, and 55 bronze coins, Torrentius’ collection of Greek coins exceeds that of most serious collectors of his time. Difficult to acquire in Rome, Greek coins mainly entered Italy through Venice. It comes as no surprise then that the Loredan collection, formed in Venice prior 1550, is abnormally rich in these series: out of 1,220 coins, 476 (39 %) are Greek (279 struck by cities and leagues and 197 struck by kings).41

For the Low Countries, the coin collection of Ogier Ghiselin de Busbecq (1522–1592), who had a long stay in Constantinople as the ambassador of the emperors of the Holy Roman Empire, is likely to have also been rich in Greek coins. We know that he regularly sent antiquities, including ancient coins, to his

38 These numbers are given by Colius Ortelianus, who annotated a copy kept in Cambridge of Adolphe Occo: Imperatorum Romanorum numismata, Antwerp, Plantin, 1579 (see Cambridge, UL, Adv. D, 3.22 (or Ms. Oo.IV35).
39 See Nicolaas Rockox: Index antiquarum statuarum et numismatum clarissimi domini Nicolaar Rockoxii equitis et VIII consulis, without date or location, 71 p. (Den Haag, Museum Meerannno-Weestrianam, Ms. 7A18). Rockox was married by Torrentius himself on September 5th, 1589; we are unaware of the number of gold coins which had already been sold at that time to Gaston d’Orléans (and must now be kept by the BnF).
40 For a denarius of C. Thermus (fol. 20), see p. 8 of the commentary; for a denarius of Sulla and Pomponius Rufus (fol. 11), see p. 11; for the denarius with CLEMENTIAE CAESARIS (fol. 15v), see p. 51 (see Tournier 1914 [note 27], p. 317, no. 2).
41 See John Cunnally: Irritamenta: Numismatic Treasure of a Venetian Collector (forthcoming – I am grateful to Ute Wartenberg for having communicated the manuscript of this superb work). Conversely, proportions of Roman Republican coins (138 = 11.3 %) as well as Imperial coins (566 = 46.4 %) are lower than elsewhere observed. It is interesting to mention in this context the letter sent to Fulvio Orsini by Antonio Agustín on October 1st, 1561, where he is describing the coin collection of Andrea Loredan of Venice (Ant. Augustini archipr. Tarrac. Opera Omnia, Lucca, 1765–1774, t. VII, 245 – quoted by Nolhac 1887 [note 18], p. 61).

In the manuscript, Greek silver coins are listed in alphabetical order in the following sequence: a) leagues and cities (fol. 34r–37v: »Graecorum numismata arg. Populorum et Civitatum«), b) kings and illustrious persons (fol. 37r–38v: »Numismata graeca regum et clarorum virorum«), c) »anonymous« (fol. 39r: »Numismata anonyma argentea«), and d) coins with legends in other languages (fol. 39v: »Nummis arg. Peregr. Inscrip.«). The author never provides specific identification of the coins himself, and his descriptions are often too rough to allow identification. So, no coin is described as »from Athens« for example, and it is likely that some descriptions are misleading.44

It should be noted that two Renaissance fantasies portraying Atreus and Sophocles found their way into the trays with the Greek bronzes. All in all, this inventory offers a vivid glimpse of how less well-known and studied Greek coins were, as compared with Roman.

The fate of this large coin collection long remained a mystery. It was kept for two centuries by the Jesuits in Leuven, until the order itself was suppressed in 1773. As discovered by Victor Tourneur, it then passed master Ferdinand.42 We are also informed that he built and kept for himself a coin collection which amazed Andreas Schottus when he saw it in Paris in 1578, but no details survive.43

To stay in the same area, but two centuries later, the coin collection formed by Charles of Lorraine, who ruled the Low Countries on behalf of his step-daughter, the Empress Maria Theresa, contained 5,640 Roman coins, but only 205 Greek (including an unpublished hoard of silver coins of Dyrrhachium). A full list of Torrentius’ identified Greek coins is given in Annex 1, while Table 3 gives a summary by areas of the contents for these two collections of the Low Countries.

Differences between the two seem to illustrate how different it was to build a collection of Greek coins in Rome in the 1550s versus the Low Countries in the 1770s. Torrentius never collected Iberian or Celtic coins. The only coins he did possess for this area were silver coins of Massalia. Two centuries later, at a time when one’s national history was more of a consideration, Charles of Lorraine was more inclined to collect local issues. On the other hand, Torrentius’ coverage of South Italy and Sicily, as well as continental Greece, seems excellent by the standards of the time, even if Sicily is only represented by Syracusan coins (which is also the case for Charles of Lorraine). Not surprisingly, coins from further East (Asia Minor, Syria, Egypt) are rare, being very difficult to acquire in Rome in the mid 16th century.

In the manuscript, Greek silver coins are listed in alphabetical order in the following sequence: a) leagues and cities (fol. 34r–37v: »Graecorum numismata arg. Populorum et Civitatum«), b) kings and illustrious persons (fol. 37r–38v: »Numismata graeca regum et clarorum virorum«), c) »anonymous« (fol. 39r: »Numismata anonyma argentea«), and d) coins with legends in other languages (fol. 39v: »Nummis arg. Peregr. Inscrip.«). The author never provides specific identification of the coins himself, and his descriptions are often too rough to allow identification. So, no coin is described as »from Athens« for example, and it is likely that some descriptions are misleading.44

It should be noted that two Renaissance fantasies portraying Atreus and Sophocles found their way into the trays with the Greek bronzes. All in all, this inventory offers a vivid glimpse of how less well-known and studied Greek coins were, as compared with Roman.

The fate of this large coin collection long remained a mystery. It was kept for two centuries by the Jesuits in Leuven, until the order itself was suppressed in 1773. As discovered by Victor Tourneur, it then passed...
at some point into the (indelicte) hands of Father Joseph Hippolyte Ghesquière (1731–1802), a Jesuit himself, and the leader of the Bollandists. Torrentius’ coin collection was ultimately sold on July 6th, 1812 in Ghent, ten years after Ghesquière’s death. Indeed, the sale catalogue was written by Pieter-Frans de Goesin-Verhaeghe, who describes the difficulties he faced in putting the collection, which was then a terrible mess, in order. His catalogue allows us to easily recognize the coin collection formed two and a half centuries previously by Torrentius.45

Father Ghesquière who, incidentally, wrote the sale catalogue of the coin collection of Charles of Lorraine,46 was a good scholar with a bad reputation.47 He was investigated for concealment after the suppression of the order. In private correspondence kept at the Royal Academy of Belgium, Crumpipen states that Ghesquière was crafty, boisterous and flattering, by far the »most perceptive, nimble and dangerous of the Jesuits«.48 It is less a question of whether he fraudulently put his hands on the Torrentius collection, but rather a question of when. He may have acted very soon after the suppression, or after 1785. Indeed, elected on May 16th, 1781 as a member of the young Académie impériale et royale de Bruxelles (at last, after several unsuccessful attempts), father Ghesquière was one of the three academicians charged on September 24th, 1785 to publish the coin collections confiscated from the Jesuits, and left in the custody of the perpetual secretary of the Academy.49 He states himself that

9 Inventory of the coin collection of Torrentius: Greek coins, Royal Library of Belgium, Ms. 6269, 34v

10 Portrait of Joseph-Hippolyte Ghesquière by Willem Jacob Herreyns

he started to collect coins in 1774, right after the suppression of the order.\textsuperscript{50} This chronology fits with the date given in 1789 when, while Ghesquière was trying to sell some valuable gold coins, it is reported that he had formed a collection 14 years previously.\textsuperscript{51}

The sale took place on July 6\textsuperscript{th}, 1812 in Ghent, the place where Torrentius was born. There, at least 3,952 Roman coins (no. 1–3,951bis) and 459 Greek coins (no. 3952–4411) were dispersed. A great number of these (but apparently not primarily ancient coins) were bought by Charles Van Hulthem, and from him passed in 1843 into the ephemeral coin cabinet formed by the Prince de Ligne.\textsuperscript{52} This collection was subsequently dispersed, and, despite some efforts, I am unable to trace for sure the current location of any Greek coin which was once passionately studied by Laevinus Torrentius in his wonderful house in Liège.\textsuperscript{53}
